Project and research

Final project - Point of sales with the shop tracking system

Point of sales system which allows salespeople to do functions such as billing, invoicing, receipt, etc. while they are on the way or at the customer's place. This is aimed to make available instant information for both front-end and back-end people of the organization.

The main purpose of this project is to give an effective and efficient service to salespersons as well as the customers and to share information providing high availability and security.

Technologies Used: C#, .Net, XML, Eclipse, SQL Lite
